

**IN THE SPECIFICATION:**

The specification as amended below with replacement paragraphs shows added text with underlining and deleted text with ~~striketrough~~.

Please REPLACE the paragraph beginning at page 5, line 1, with the following paragraph:

To accomplish the above and other objects of the present invention, there is also provided a method of reproducing data from a recording medium on which first data and second data, which are different from each other in type and which are each formed of a respective plurality of data units, are recorded. A first data unit descriptor table and a second data unit descriptor table are also recorded on the recording medium. The first data unit descriptor table and the second data unit descriptor table include information on the first data units and the second data units which is respectively stored as data unit descriptors. A first program descriptor table and a second program descriptor table, in which information on one or more data units forming respective programs is stored in the program descriptor of the corresponding program in the form of information on respective data unit descriptors, are recorded on the recording medium. The program descriptor of the second program descriptor table includes information for linking the first data and the second data. The reproducing method comprises reading the second program descriptor having information on the program to be reproduced, and reading information about the first data unit descriptor and the second data unit descriptor related to the corresponding program, from the read second program descriptor; reading the corresponding data unit descriptors from the first and second data descriptor tables corresponding to the read first and second data unit descriptors; and synchronizing and reproducing the first data unit and the second data unit indicated by the read first and second data unit descriptors.
